

Walking for Seniors Over 60 - Printable Pack

From *Walking for Seniors Over 60* by Margaret Hale (Oro Enigma Publishing). Print as many copies as you need.

Appendix A - The 12-Week Tracker and the Step Log

One line a day; a tick is enough.

The 12-week tracker

[illegible]

The balance tests

	Week 1	Week 12	3 months later	6 months later
30-second chair stand (count)				
Four-stage balance (stage reached)				
Timed up and go (seconds)				
Resting pulse (a morning, before getting up)				
Blood pressure (if you measure it)				
Weight (if you want to)				

The step log (one month)

Day	Steps	Walk (min)	Pace (easy / brisk / intervals)	Notes (weather, route, how it felt)

Appendix B - The Routine Cards

Cut out and stick on the fridge.

The 10-minute routine	The 15-minute routine	The 20-minute interval routine
1 min march, easy	2 min march, shoulders, ankles	3 min march, shoulders, ankles, side steps
1 min shoulder rolls	1 min side steps	2 min knee lifts, heel digs
1 min side steps	1 min knee lifts	2 min FAST: arm swings, high knees
1 min knee lifts	1 min heel digs	2 min easy: step touch
1 min heel digs	1 min step touch	2 min FAST: knee lifts, big arms
1 min step touch	1 min box step	2 min easy: box step
1 min hamstring curls	1 min hamstring curls	2 min FAST: grapevine (or heel digs)
1 min march, brisk	1 min toe taps	2 min easy: march, easing off
1 min march, easing off	1 min power arm swings	3 min the five stretches
1 min calf and hamstring stretch	1 min knee lifts, brisk	
	1 min march, brisk	
	1 min march, easing off	
	2 min calf, hamstring, thigh stretch	

The balance block (3 times a week)	The tai chi walk (rest day)
Heel-to-toe stand, 30 s each side	Weight shifting, 1 min
Single-leg stand, 10 to 30 s each side	Cat step along the hall, 2 to 3 min
Tandem walk, 10 steps, twice	Cloud hands walking, 2 min
Side leg raises, 10 each side	Cat step again, 2 min
Sit-to-stand, 8 to 12, twice	Chest opener to finish
Heel raises, 10 to 15, twice	
Walking backwards, 10 steps, twice	
Weeks 1-3 two hands; 4-6 one hand; 7-9 fingertips; 10-12 no hands where safe	Slowly. Breathe.

Appendix C - Heart Rate and Effort Tables

The talk test beats the numbers after sixty, because beta blockers and several other medicines lower the heart rate, and because the old "220 minus age" formula is only an average. For those who use a watch, the ranges below are the usual guide; if your doctor has given you a limit, that limit wins.

Age	Estimated maximum (220 minus age)	Easy (50 to 60%)	Brisk (60 to 70%)	Fast intervals (70 to 80%)
60	160	80 to 96	96 to 112	112 to 128
65	155	78 to 93	93 to 109	109 to 124
70	150	75 to 90	90 to 105	105 to 120
75	145	73 to 87	87 to 102	102 to 116
80	140	70 to 84	84 to 98	98 to 112
85	135	68 to 81	81 to 95	95 to 108

Effort scale (out of 10). 1 to 2 sitting; 3 to 4 easy, could sing; 5 to 6 brisk, full sentences; 7 to 8 fast, a few words; 9 to 10 cannot speak (never in this plan).

Resting pulse. Take it in bed before getting up, once a week: a falling resting pulse over the twelve weeks (five to ten beats is common) is the fitness arriving.

Walking speed. About 100 steps a minute is an easy walk (roughly 4 km/h, 2.5 mph); 110 to 120 is brisk (5 km/h, 3 mph); 130 is fast for most people over sixty. A brisk walk covers about 2.5 km (1.5 miles) in thirty minutes.
