

Space Facts for Kids - Printable Pack

From *Space Facts for Kids* by Ben Hollis (Oro Enigma Publishing). Print as many copies as you need.

The Solar System Poster

Planet	Distance from the Sun	How wide	A day	A year	Known moons	Made of
Mercury	58 million km	4,880 km	59 Earth days	88 days	0	Rock and metal
Venus	108 million km	12,100 km	243 Earth days	225 days	0	Rock, under thick hot clouds
Earth	150 million km	12,742 km	24 hours	365 days	1	Rock, water and air
Mars	228 million km	6,779 km	24 hours 37 min	687 days	2	Rock and rusty dust
Jupiter	778 million km	140,000 km	10 hours	12 years	Nearly 100	Hydrogen and helium gas
Saturn	1.4 billion km	116,000 km	10.7 hours	29 years	Well over 100	Gas, with rings of ice
Uranus	2.9 billion km	51,000 km	17 hours	84 years	28	Ice and gas, on its side
Neptune	4.5 billion km	49,000 km	16 hours	165 years	16	Ice and gas, very windy

A way to remember the order: My Very Easy Method Just Speeds Up Naming.

The Size Chart

Object	How wide	About the size of
The Sun	1.4 million km	109 Earths side by side
Jupiter	140,000 km	11 Earths side by side
Saturn	116,000 km	9 Earths side by side
Uranus	51,000 km	4 Earths side by side
Neptune	49,000 km	4 Earths side by side
Earth	12,742 km	A peppercorn, if the Sun is a football
Venus	12,100 km	Almost the same as Earth
Mars	6,779 km	Half of Earth
Ganymede	5,268 km	The biggest moon; bigger than Mercury
Mercury	4,880 km	A third of Earth
The Moon	3,474 km	A quarter of Earth
Pluto	2,377 km	Smaller than the Moon
Ceres	940 km	The biggest asteroid
Enceladus	504 km	It would fit inside France
Phobos	27 km	A city
Halley's Comet (the solid part)	15 km	A town
The International Space Station	109 m	A football pitch
The Saturn V rocket	111 m	A 36-storey building
Sputnik 1	58 cm	A beach ball

The Quiz Sheet

	Question	Answer
1	How long does the Sun's light take to reach Earth?	
2	Which is the biggest planet?	
3	The hottest planet, and why?	
4	How many people have walked on the Moon?	
5	A light year: a time or a distance?	
6	Which planet has the biggest volcano?	
7	What are Saturn's rings made of?	
8	Which planet rolls on its side?	
9	Why did Pluto stop being a planet?	
10	Which moon is bigger than Mercury?	
11	Which moon has 400 volcanoes?	
12	Where is there an ocean twice the size of Earth's seas?	
13	What is a comet made of?	
14	What is a shooting star?	
15	The nearest star to the Sun?	
16	The brightest star in the night sky?	
17	What will happen to Betelgeuse?	
18	How do you find the North Star?	
19	What is a nebula?	
20	What is left when a giant star explodes?	

21	What is a black hole?	
22	What is the Milky Way?	
23	The farthest thing you can see with your eyes?	
24	Why does a rocket work in space?	
25	How fast to stay in orbit?	
26	Why must astronauts exercise two hours a day?	
27	The first satellite, and when?	
28	The farthest spacecraft, and what it carries?	
29	How old is the universe?	
30	Is there life anywhere else?	

My Space Object

Name	
How to say it	
What kind of thing (star, planet, moon, dwarf planet, asteroid, comet, nebula, galaxy, spacecraft)	
Where it is	
How far away	
How big	
How hot or cold	
What it is made of	
Who or what has visited it	
Three facts	
My fun fact	
My drawing (on the back)
